

"I'm a year 13 student studying biology, geography and psychology at A level.

My teachers at Launceston College Sixth Form have encouraged me to discover what I am most interested in and helped me to stretch my knowledge to achieve the best I can, even beyond the curriculum.

The Sixth Form team have allowed me to take on as many opportunities as possible, such as work experience at a local primary school, the Duke of Edinburgh Award and the aspire programme. Participating in the aspire program led me to enter and win 'Young Scientist of the Year' in Launceston's CafeScientifique research and presentation competition, and has helped support me to achieve my goals. These extracurricular activities have helped me develop the skills needed to study Psychology at university."
